

Projected Impact:

- Support more than 1,000 farmers in the Egyptian North Coast during the initial deployment phase.
- Reduce crop losses by enabling early tomato disease detection and intelligent crop selection.
- Help farmers save irrigation and farming costs through data-driven agricultural decisions.
- Improve land-use efficiency under water scarcity and soil salinity conditions.
- Contribute to sustainable agriculture by reducing unnecessary resource consumption and minimizing environmental impact.

Elevator Pitch:

AI-Powered Smart Farming is an intelligent agricultural platform that combines tomato disease detection and crop recommendation using Deep Learning and Computer Vision. Our system helps farmers in the Egyptian North Coast reduce crop losses, improve productivity, and make smarter farming decisions in under 5 seconds.
